

The industry's most fiber-optimized platform for automated network design and planning.

spatialSUITE

Trusted by fiber leaders

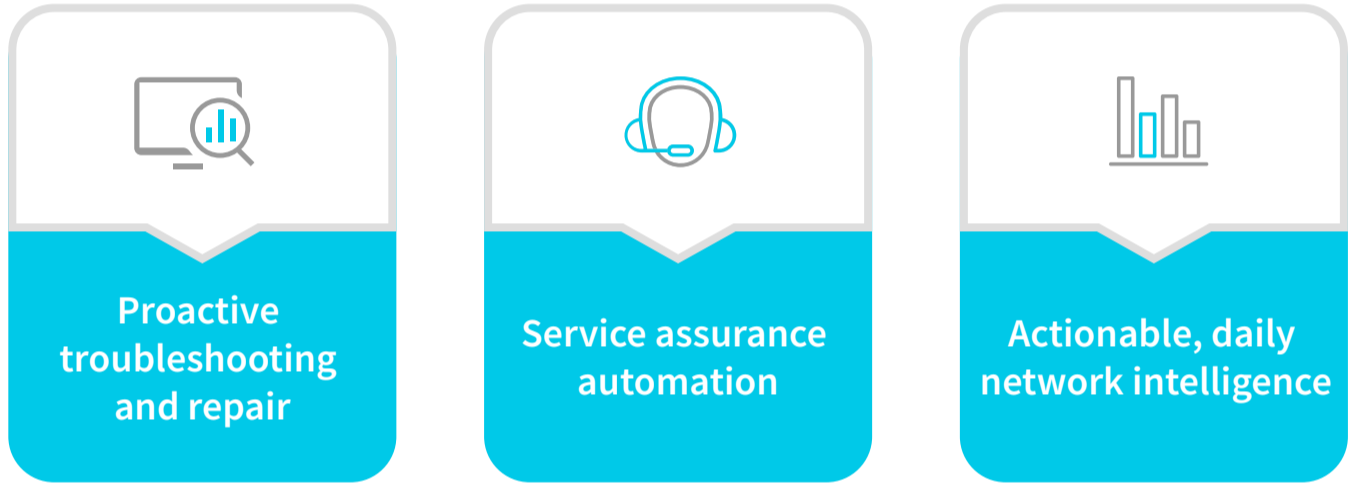

“ We’re proud of the years of strategic investment and innovation that enabled us to build the foundation of a high-speed, intelligent network designed to scale to the needs of our most demanding users, and also adapt to unexpected events.

Tony Werner
President of Technology, Product, Xperience

Comprehensive, extensible fiber tools that deliver customer satisfaction

“ A customer first approach is key for Eastlink. We implemented an assurance application that leverages outside plant records by identifying locations of equipment having issues. This allows our teams to proactively troubleshoot and repair issues without impact to customers. This is possible because Eastlink has consolidated our network inventory into a comprehensive, connected, single source of truth using spatialSUITE.

Andy Arsenault
Vice President, Field Operations

Broad range of fiber networks under management worldwide

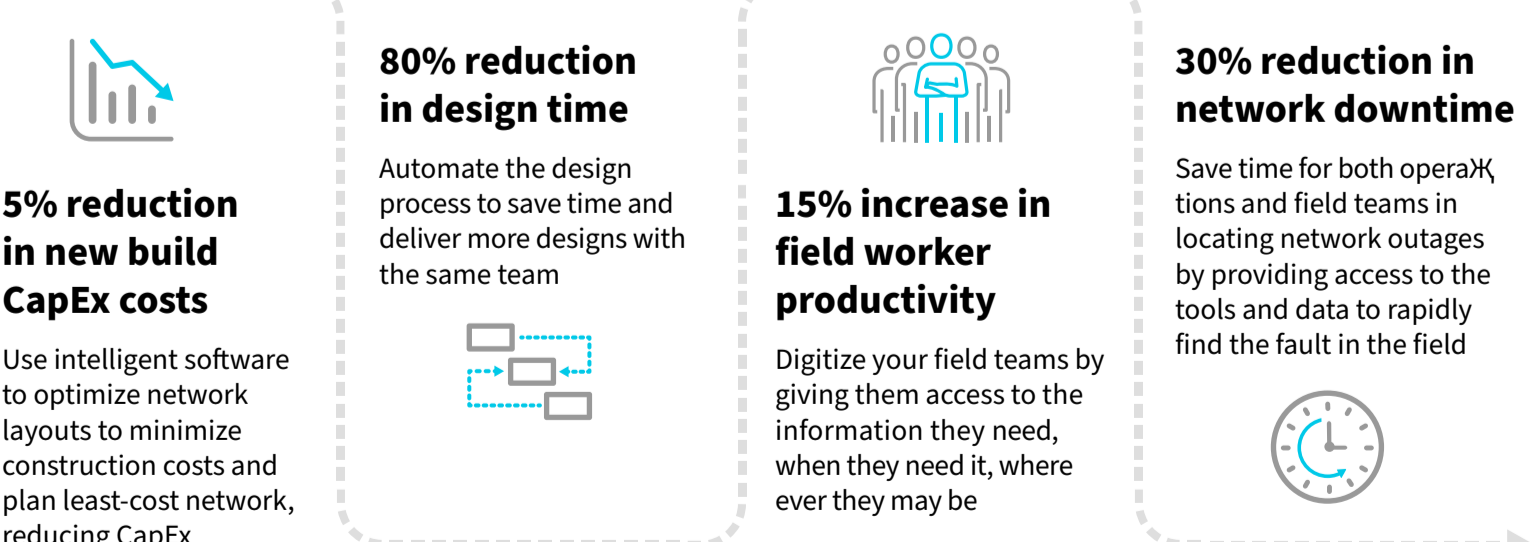

“ spatialSUITE allows leadership to ensure our design standards are followed by our teams. Using built-in reports, we can quickly identify and resolve errors. This is critical to keeping our network inventory consistent and accurate which in turn lets us provide top-notch service to our residents.

Kim Quinones
HFC Power Division Supervisor

Payback period: two fiber projects¹

Benefits to fiber companies across the plan, design, build and operate lifecycle
